| Question | Answer |
| :---: | :---: |
| 1 | a) $27 \quad 57$ <br> The sequence is increasing by 10 <br> b) $119 \quad 129 \quad 159$ <br> The sequence is increasing by 10 <br> c) $575 \quad 775975 \quad 1,075$ <br> The sequence is increasing by 100 <br> d) $7,300 \quad 10,300 \quad 11,300 \quad 12,300$ <br> The sequence is increasing by 1,000 <br> e) 6,290 6,260 6,250 6,240 <br> The sequence is decreasing by 10 |
| 2 | a) $\begin{array}{llllll}4 & 14 & 24 & 34 & 44 & 54\end{array}$ <br> b) $4 \quad 104 \quad 204 \quad 304 \quad 404 \quad 504$ <br> c) $4 \quad 1,004 \quad 2,004 \quad 3,004 \quad 4,004 \quad 5,004$ <br> d) Many possible answers, e.g:: <br> They all have the same starting term 4 <br> Every term in all of the sequences will end with 4 <br> The second term in each sequence has a 1 in it, but the value of the 1 is different in each sequence <br> Each sequence increases by different amounts. etc. |
| 3 | 9,150 6,050 155,250 <br> Since the sequence is increasing by 100 from term to term, the tens and ones digits will always remain the same (50). Any values in the other columns are possible. any numbers that have 5 in the tens column and 0 in the ones column, e.g. $450 \quad$ 19,950 |
| 4 | a) 234,650 <br> b) The green counter moves right. <br> c) The purple counter moves left. <br> d) The counter moves down to the beginning of the next row e.g. $9+1=10,90+10=100$ etc. |
| 5 |  |

| Question | Answer |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | Number | 10 more | $100$ <br> more | 1,000 <br> more | $\begin{gathered} \text { 10,000 } \\ \text { more } \end{gathered}$ | $100,000$ <br> more |
|  | 25 | 35 | 125 | 1,025 | 10,025 | 100,025 |
|  | 250 | 260 | 350 | 1,250 | 10,250 | 100,250 |
|  | 2,500 | 2,510 | 2,600 | 3,500 | 12,500 | 102,500 |
|  | 25,000 | 25,010 | 25,100 | 26,000 | 35,000 | 125,000 |
|  | 250,000 | 250,010 | 250,100 | 251,000 | 260,000 | 350,000 |
|  | Many possible answers e.g: <br> For 25, the tens and ones column always remain as 25 except in 35 <br> The sum of the digits inputted is 7 , but the sum of the digits in the answers is 8 etc. |  |  |  |  |  |
| 6 | If Brett adds both counters to the same column, he could make: $\begin{array}{\|llll} \hline 413,850 & 233,850 & 215,850 & 213,870 \end{array} 213,852$ <br> There are many more possible solutions if he adds the counters to different columns e.g.: 323,850 213,951 etc. <br> He can't add both counters to the hundreds column because then he would have to exchange the 10 hundreds for 1 thousand. |  |  |  |  |  |
